

WELDING CAP SIZING CHART

Please use a soft measuring tape to get your measurements or a string.

A- Crown Depth: We offer several different depths.

1-Our original which fits just above the ears.

2-There are 4 other depths that go over the ears.

3-To determine your hat depth measure from the crown down to your ear and place the tape where you would like the hat to be.

B- Head Circumference:

1-Place tape just above your eyebrows and wrap around your head.

2-If your hat is to cover your ears include them in the measurement.

(Note: Do not pull the tape tight but put tape to where it is comfortable for you.)

3-Match your measurement with the size below.

C-Shrinking of our hats is minimal because we wash and dry the fabric before making the hats and then again after the hats are made.

If using a string mark or hold where it meets the end and lay on a tape measure to get the inches.

Our caps have the option of 4 different sized bills as well.

Small, Medium, Large and XLarge.
